SuperCharge Batteries expressly denies any responsibility for the accuracy of the information provided to us. While we have made every effort to accurately catalogue the replacement battery information contained in this book, SuperCharge Batteries denies any liability for damages as a consequence of using the information in this book. Users should also attempt to obtain replacement battery information from the equipment manufacturer's user manual or service department for their specific application.

35 YEARS OF SUPERCHARGE BATTERIES

SuperCharge Batteries has been supplying batteries to the Australasian markets since 1984. Together with our trade partners, we have powered millions of motorists on the roads and waterways for over 35 years.

The success we enjoy today is the culmination of carefully nurtured partnerships, products and processes established over the last three decades. And while we take a moment to celebrate our history and our partnerships, we also look to the future because we know the best is yet to come.

Our proven product range covers the full spectrum of customer needs, from automotive to truck, marine, motorcycle, recreation and industrial batteries. We offer one of the longest nationwide warranties with full sales and servicing support.

Thanks to an unshakable commitment to research and development, product innovation and quality control, SuperCharge has remained at the forefront of innovation - consistently pioneering new products and raising industry standards.

With a comprehensive nationwide network consisting of over 30 warehousing locations and a team of dedicated sales and service experts, we are well equipped to exceed today's demands.

EXTENSIVE PRODUCT RANGE

In recent years, SuperCharge Batteries has led the way with a comprehensive range of "Maintenance Free" batteries, using EXG calcium plate technology to deliver a long lasting performance product. Supercharge Batteries has a product range which caters for a number of applications including automotive, motorcycle, truck, marine, industrial, farming and recreation.

NATIONWIDE COVERAGE

SuperCharge Batteries recognises the need to have people on the ground ready to assist where and when we can. Our comprehensive nationwide network consists of over 30 warehousing locations, while a team of dedicated sales and service experts ensures we are well equipped to meet your needs and to exceed today's demands.

LONGER WARRANTY

When you have a product that you fully believe in, it makes sense to back it up. Supercharge Batteries was the first to introduce the industry leading 36 month warranty. And once again Supercharge has leaped forward to offer up to 40 month warranty again setting a new benchmark for the industry. With all our battery ranges, the quality and care that has gone into producing them means that you are covered for an industry-leading 'peace of mind' warranty period.

EXCELLENT VALUE

Our manufacturing efficiencies and nationwide distribution ensure SuperCharge Batteries have an excellent shelf life and price as well. Our batteries offer superior capacity and a longer warranty than others in the market, retaining their charge longer, saving time rotating stock. Our name is trusted, with a large range, allowing resellers to recommend with confidence.

The equation is simple: Reliability + durability + performance = superior value for money.

FULL SUPPORT

We value service highly – to both resellers and consumers. Our experienced support team are experts in on-the-spot assistance in all areas – providing valuable technical and sales knowledge and prompt warranty resolution. Resellers have access to a dedicated contact in each state or territory Australia-wide; 1300 737 244 while consumers connect through our 1300 228 888 hotline. In New Zealand call 0800 188 122. We are here to help.

GLOBAL STRENGTH

SuperCharge Batteries are designed and manufactured by parent company, Ramcar - the fastest growing battery manufacturer in Asia.

With over 95 years in manufacturing, Ramcar has made huge investments in research and development to create the very latest innovations in battery technology.

Producing more than 700,000 expanded grid calcium-calcium batteries each month, Ramcar is unique in its ability to manufacture all steps of the production process in house. From our state-of-the-art lead smelter, die and mould fabrication, plastic injection and acid plants to final assembly and shipping, our recycling plant completes our commitment to efficiency through self-sufficiency.

With world-class facilities in the Philippines, we adhere to international safety and compliance standards. Our compliance to the ISO/TS 16949 standard is crucial in governing our supply chain quality control. ISO 9001 has an emphasis on reduction of waste while ISO 14001 is recognised for its environmentally responsible protocols meaning our certification covers all aspects of the manufacturing process. Ours is a truly sustainable and socially responsible approach where raw materials are continuously recycled from old to new.

Ramcar's quality assured products are supplied to USA, Canada, South East Asia, Europe, the Middle East, New Zealand and Australian markets. Offering a truly world-class battery product that excels in the harshest winter conditions and the extreme heat of the Australian outback. SuperCharge Batteries brings this technology to Australia, providing the ultimate in battery solutions to a wide variety of applications.

SuperCharge Batteries Pty Ltd is backed by a manufacturing legacy that spans over 95 years, through our parent company, the Ramcar Group of Companies. Based in Philippines, Ramcar is the fastest growing battery manufacturer in Asia, and has driven significant growth in the Australian marketplace.

The road conditions in the Philippines are a true test of any battery's performance under pressure. With sharp variations in road quality, terrain and climate, they rival any of the world's most challenging routes. Australian motorists can rest assured knowing that SuperCharge Batteries will be just as at home in the outback as they are in the humid highlands of South East Asia.

More than 700,000 expanded grid calcium-calcium batteries are produced each month at Ramcar's fully integrated and modern factory. Incorporating every aspect of the battery making process, this purpose-built facility houses lead recycling, tool, die and mould fabrication, as well as plastic injection and acid plants. It also places high priority on research and design, the result of which flows through to continuous advances across our entire product range.

HIGH STANDARDS

Throughout Ramcar's entire operation, rigorous international safety and compliance standards are maintained. Our commitment lies not just with our product's quality but also in the footprint it leaves on the planet, and to this end we proudly adhere to ISO14001 standards for environmental management systems. This voluntary standard is recognised across the globe and governs environmentally responsible protocols across all business sectors.

Our compliance to the ISO/TS16949 standard is crucial in governing our supply chain quality control. ISO/TS16949 is an automotive-related derivative used in conjunction with the universal ISO9001 quality standard, and is concerned with the development of a quality management system with emphasis on defect prevention and reduction of waste. Ramcar's factory-wide efficiencies have guaranteed certification in this area. Ramcar is one of the few manufacturers in Asia to be granted a Ford QI.

With Ramcar's quality assured products also being supplied to USA, Canada, New Zealand, Malaysia, Europe, the Middle East and many other parts of Asia, SuperCharge Batteries' superior offering in the Australian market is testament to this truly world-class expertise.

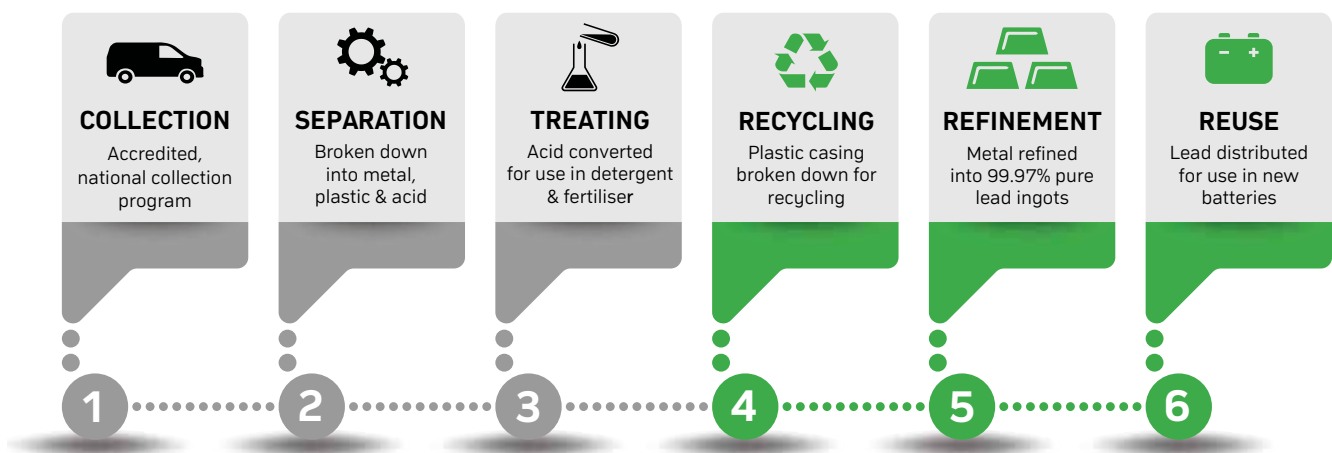

TAKING CARE OF THE ENVIRONMENT

WORLD LEADING ULAB RECYCLING

Established in 2007, our Used Lead Acid Battery (ULAB) recycling and collection program has become industry leading, providing innovative resource recovery solutions and management programs that meet the needs of businesses and the environment.

We differentiate ourselves by offering businesses an accredited, nation-wide solution for the collection, recycling and reprocessing of ULAB through our state-of-the-art recycling facility in New South Wales. Just another reason why SuperCharge Batteries is the ultimate battery solutions partner for your business.

ULAB RECYCLING PROCESS

NATIONAL COLLECTION NETWORK

We have collection agents and points across Australia. All agents and facilities are EPA compliant, insured and comply with all relevant legislation including:

- **Environmental accreditation ISO14001**
- **Waste transport and waste storage licences**
- **Public Liability, vehicle, premise and goods insurance**

WORLD CLASS RECYCLING FACILITY

Our best-of-breed lead recycling facility is located in Wagga Wagga, New South Wales. Our facility has the capacity to produce both an international standard of soft lead or alloys specially tailored to our clients requirements. The feedstock used in our operation comes from nearly 4.5 million junk batteries collected each year.

OUR ENVIRONMENT

We are committed to implementing and maintaining best environmental practice and continuously improving through review, assessment and reporting. Lead is an infinitely recyclable resource and when recycled with SuperCharge Batteries, it adds real value to sustaining our modern way of life.

SUPERCHARGE BATTERIES PRODUCT LIFECYCLE

AUSTRALIA'S ONLY FULL LIFECYCLE BATTERY PARTNER

- Full aggregation service including collection, transport and recycling
- National network of collection agents and over 12,000 collection points
- Australia's only ISO14001 accredited ULAB collection network
- World's most environmentally sustainable operation of its kind
- Most modern ULAB recycling facility with latest technology
- Highest levels of responsibility for the benefit of the environment, community and workforce
- Global best practice for environmental standards from battery collection to lead ingot production
- At least 97% of a battery recycled into reusable lead, polypropylene and sodium sulphate

SuperCharge Batteries offers a complete national network covering dozens of locations, each manned by experienced team members who thrive on delivering outstanding service by partnering with our clients' businesses. We know that it's the people who make the difference which is why we are Your Battery Specialists.

INNOVATION AND TECHNOLOGY

Our commitment to continuous improvement is born from an obsession with innovation. Since our ground-breaking rollout of the maintenance free battery with the cutting edge and patented Expanded Grid Technology (EXG), the SuperCharge team have continued their focus on improving design and maximising the two most important characteristics of any battery, more power and a longer life.

What is so special about EXG? The benefits are many. The construction of the calcium plates in super compressed rolled strips creates a dense grid pattern allowing for a more compact unit. It is less susceptible to heat corrosion and delivers more efficient cranking power. Also, as the EXG plates are shorter and have minimal gassing, there is less water loss and no acid top up is required.

SuperCharge Batteries have now gone further by introducing Optimal Plate Technology (SNT). SNT is included in our new product range. SNT optimises our plate performance through a special mix of Lead-Calcium-Tin alloy and paste additive that promotes uniform plate structure delivering consistent reliable capacity. SNT also works with our existing EXG high quality grids to improve corrosion and creep resistance to extend the life of the battery.

Our confidence in this revolutionary 'maintenance free' battery is so great we offer up to 40 months warranty.

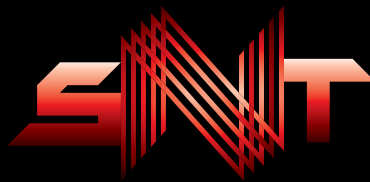

Continuous improvement keeps us moving forward and our legacy continues to grow. Cue the new TruckMaster Hybrid powered battery.

'Glass Mat' technology literally bonds the various components in our battery together, minimising the effects of vibration by preventing shedding where material falls to the bottom of the cell. These innovations mean batteries subjected to extreme vibration like trucks and SUV's are now resistant to the harmful effects of vibration.

Using our antimony positive/calcium negative Dual Alloy Technology, the TruckMaster has several benefits starting with better recharging ability. It is also more corrosion resistant than calcium/calcium products, due to thicker plates being installed. And finally, the use of our 'Glass Mat' Separator allows for the plates to be more tightly compacted and therefore more vibration resistant.

EXPANDED GRID TECHNOLOGY
EXTRA POWER • EXTENDED LIFE

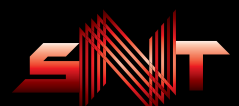

OPTIMAL PLATE TECHNOLOGY
EXTRA POWER • EXTENDED LIFE

THE NAKED TRUTH

EXPANDED GRID TECHNOLOGY
EXTRA POWER • EXTENDED LIFE

OPTIMAL PLATE TECHNOLOGY
EXTRA POWER • EXTENDED LIFE

MAINTENANCE-FREE SEALED COVER DESIGN

- 1 **Foldable Handles** for ease of handling and installation.
- 2 **Hydroeye™** indicates state of charge.
- 3 **Porex Technology**, an advance breather system to help prevent pressure build-up inside the battery and helps minimise the risk of explosion from externally generated sparks.
- 4 **Liquid Gas Separator Design** allows recirculation of acid back into the battery reducing the risk of acid starvation.
- 5 **Advanced Polypropylene Casing**, computer controlled heat injected, light weight plastic resin, moulded to improve impact resistance.

LEADING ENABLING TECHNOLOGY

- 6 **Polyethylene Envelope Separators** provide enhanced cranking power through minimised electrical resistance and longer life through better puncture and tear resistance.

- 7 **Proprietary Paste Formulation**, developed and designed to deliver more cranking and reserve capacity per gram of active material using controlled processes ensuring longer lasting and consistent high quality plates. For our GoldPlus range we added SNT technology to optimise plate performance through a special mix of Lead-Calcium-Tin alloy and paste additive that helps deliver even more consistent, reliable capacity.
- 8 **Expanded Lead-Calcium-Tin Grids**
 - High density grids to provide superior performance against corrosion and overcharging.
 - Interlocking grid design to provide exceptional active paste material adhesion.
 - Calcium (Ca) alloy to provide very low self-discharge and prevent excessive gassing and thermal runaway plus Tin (Sn) alloy to improve charging capability.
 - For our GoldPlus range, SNT also works with our existing EXG high quality grids to improve corrosion and creep resistance to extend the life of the battery.

PRODUCT RANGE

GoldPlus

Sealed Expanded Calcium MF

- Top of the line
- Fully sealed maintenance-free
- Superior starting power and reserve capacity
- Up to 40 months warranty

SilverPlus

Sealed Expanded Calcium MF

- Fully sealed maintenance-free
- Exceptional starting power and reserve capacity
- Up to 30 months warranty

PowerStation

- Reliable starting power
- Performance proven technology
- Up to 24 months warranty

TruckMaster Accessible Hybrid

- Hybrid plates
- Antimony positive / calcium negative
- Exceptional durability in extreme conditions
- For commercial use
- For long haul applications
- Up to 24 months warranty

Start-Stop Absorbent Glass Mat (AGM)

- Spill-proof design
- Greater cycle life
- Excellent charge acceptance
- Flat plate design to achieve consistent optimal performance
- Highly efficient special micro-porous glass mat separators that absorb electrolytes

Start-Stop Enhanced Flooded Batteries (EFB)

- High density plate design for better corrosion resistance
- Improved plate design's quality and consistency compared to conventional flooded automotive batteries
- Superior starting power and reserve capacity
- Increased cycle life
- Increased vibration resistance

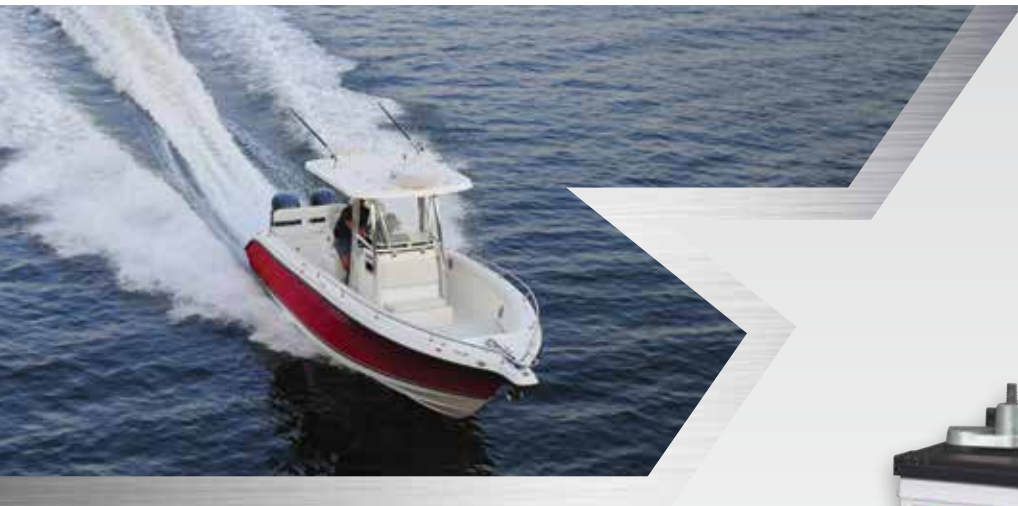

PRODUCT RANGE

SeaMaster Gold

Sealed Expanded Calcium MF

- Maintenance-free
- Vibration resistant
- Premium, extra heavy duty marine battery
- Up to 24 months warranty

SeaMaster

Accessible Expanded Calcium MF

- Minimal maintenance
- Vibration resistant
- Heavy duty marine battery
- Up to 18 months warranty

ALLROUNDER

Dual Purpose

- Maintenance-free design
- Improved cranking and semi deep-cycling ability
- Minimal self-discharge rate
- Improved heat and vibration tolerance for long service life
- Up to 12 months warranty

Amp-Tech

Flooded Deep Cycle

- Accessible battery design
- Minimal self-discharge rate
- Exceptional strength, durability and reserve capacity
- Available in a range of sizes to suit stand-by and mobility applications
- Up to 12 months warranty

*Also available Amp-Tech VRLA-AGM (leak proof Sealed Valve-Regulated Maintenance Free battery)

SERVICE & SALES SUPPORT

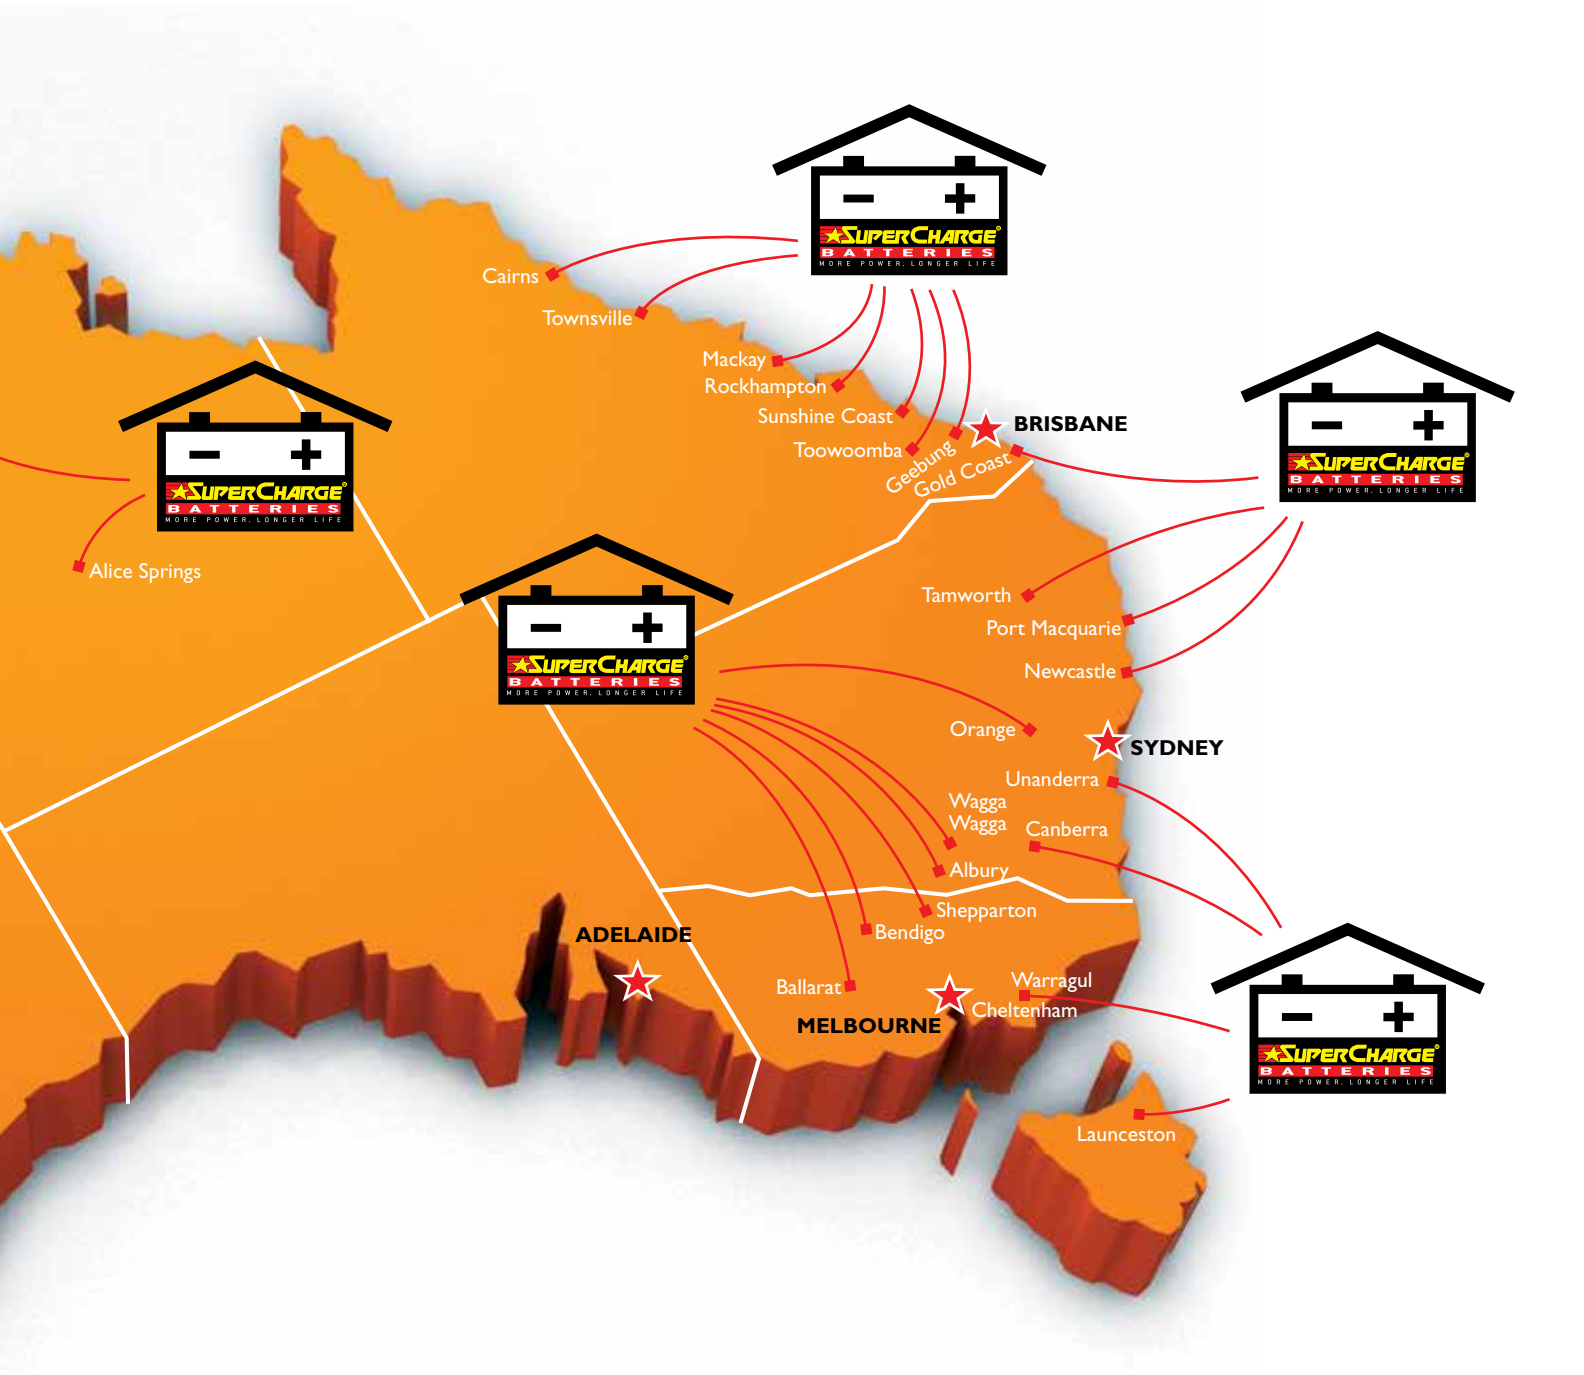

When delivering a superior product, you're only as good as the back up support you provide. SuperCharge Batteries is extremely proud of our nationwide coverage, having serviced thousands of customers across Australia throughout the years. Our network includes over 30 warehousing locations and over 60 vehicles for timely, efficient product delivery.

With an experienced and dedicated team at the helm, we ensure that our products (and yours) are in safe hands. Batteries will always arrive clean, fresh and ready to start every time, while our friendly staff settles all product warranties promptly and efficiently.

SuperCharge has a real commitment to customer service, viewing our interactions with customers just as important as the performance of the batteries themselves. Both should provide immediate results and long lasting reliability. Recent improvements to our information systems and database technologies have enabled us to keep customers and our staff informed of latest news and product information.

Thanks to constant feedback and consistent service, SuperCharge Batteries continue to exceed Australia's motoring needs.

DEMAND SUPERCHARGE BY NAME.

DEEP CYCLE BATTERY

DEEP CYCLE MAINTENANCE

1. Batteries should be kept clean, free of dirt and corrosion. Where accessible, regularly check that the plates are covered by approximately 4mm of electrolyte. Add distilled water if necessary. **DO NOT OVERFILL.**
2. Ensure battery cables are intact, connectors are tight and vent caps are kept in place. Battery should be stable and held firmly in place during vehicle operation. Regular vehicle voltage and system checks are recommended.
3. Use only stainless steel nylock nuts for attaching connectors to a threaded post. Make sure the eyelet/connector contacts well to the lead base. Do not put washers underneath the eyelet/connector. Tighten until the eyelet/connector and lead base are flat with good contact; afterwards tighten by half a turn. Do not over tighten.
4. The full performance of your deep cycle battery will not be reached until the battery is cycled several times (20-50 cycles, depending on the type). Temperature can affect the battery performance.
5. Do not discharge your battery below 11.5 volts. Excessive discharge will significantly shorten battery life and may void warranty.
6. A weak battery will cause premature failure of companion batteries. Do not put a new battery in a pack which has had at least 50 cycles. Either replace the entire lot or replace defective battery with a good used battery.
7. Extreme temperatures can substantially affect battery performance and charging. Cold reduces battery capacity and slows charging. Heat increases water usage and can cause overcharging.
8. Deep cycle batteries need to be equalised periodically. Equalising is an extended, low current charge performed after the normal charge cycle. This helps keep all cells in balance. Actively used batteries should be equalised once a week. Manually timed charges should have the charge time extended by approximately 3 hours. Automatically controlled chargers should be unplugged and reconnected after completing a charge.
9. Batteries self-discharge when stored. If seasonal use is anticipated, we recommend the following:
 - a. Fully charge the battery before storage.
 - b. Remove all electrical connections from the battery, including series/parallel connectors.
 - c. Store the battery in cool and dry place.
 - d. Boost every two months.
10. Use appropriate setting on your battery charger, depending on the type of deep cycle battery you have.

GETTING THE RIGHT DEEP CYCLE BATTERY

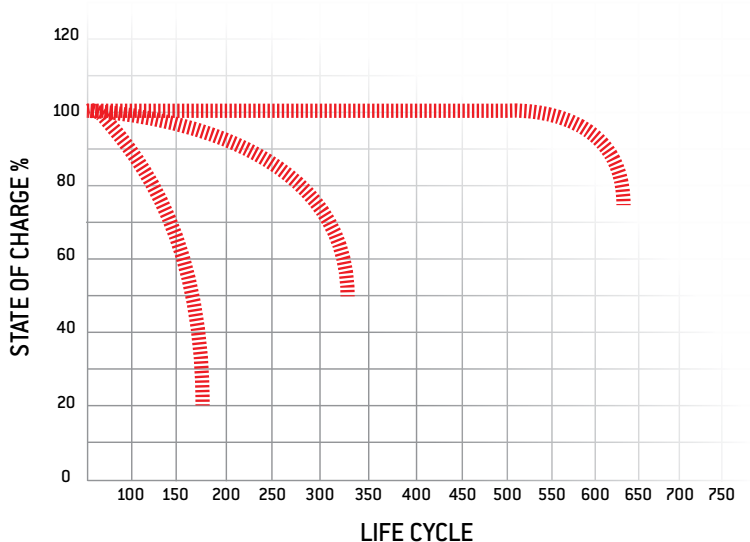

To determine the correct deep cycle battery size for your application:

1. Identify the Ampere Hours (AH) required for each electrical equipment. Divide the loading (watts) by the system voltage (i.e. 12 volts) then multiply by the intended time of usage.
2. Add the AH required and increase this by 30% for a safety cushion. In the example below, you need a battery that can deliver 101AH (safety cushion added to 77.5 total ampere hour requirement).

Equipment	Loading (in watts)		System Voltage		Usage Hours		Ampere Hours Required	
Lights	45	/	12	X	4	=	15.0	
Refrigerator	60	/	12	X	5	=	25.0	
Pump	70	/	12	X	3	=	17.5	
Radio	80	/	12	X	3	=	20.0	
Total Ampere Hours Required								77.5
Plus Safety Cushion of 30%								101 Ampere Hours

3. Select the deep cycle battery which will deliver the AH for the required time and voltage. In the sample above you'd need a deep cycle battery which has a 20AH rating of 105AH.
4. The cycle life of the deep cycle battery will depend on operating conditions such as extent of use, temperature and charging conditions. The table below illustrates the expected life cycle under test conditions.

DEPTH OF DISCHARGE LIFE CYCLE CHART

Test Condition: Cut-off Voltage Discharge
Depth 100%: 1.75 volts per cell
Temperature: 27°C
Charge: Constant voltage control
 (14.4V for flooded or
 14.1V for AGM-VRLA)

Note: Cycle times are different from this data when using batteries under real conditions.

1. If unsure with your computation, consult your local battery specialist or certified technician.
2. Note that connecting batteries in parallel add to the Ampere Hours, while connecting in series adds to the Voltage. In either case the energy storage capability is increased by the amount of energy each additional battery provides.

TESTING AND CHARGING FOR ACCESSIBLE BATTERIES

BATTERY TESTING

Please ensure to fully charge or attempt to fully charge the battery before testing.

STATE-OF-CHARGE TEST

The State-of-Charge test checks the battery's chemical condition. One method uses a hydrometer to measure the specific gravity of the electrolyte. Another measure uses a digital voltmeter to check the battery's open circuit voltage and, for a general indication of the battery's condition, check the indicator eye (if the battery has one) or check the headlamp brightness during starting. Another option is performing a Heavy Load test.

SPECIFIC GRAVITY

Specific gravity means exact weight. The hydrometer compares the exact weight of electrolyte with that of water. Strong electrolyte in a charged battery is heavier than weak electrolyte in a discharged battery. By weight, the electrolyte in a fully charged battery is about 39% acid and 61% water. The specific gravity of water is 1.000. The acid is 1.835 times heavier than water, so its specific gravity is 1.835. The electrolyte mixture of water and acid has a specific gravity of 1.285 and is usually stated as "twelve-eighty five". By measuring the specific gravity of the electrolyte, you can tell if the battery is fully charged, requires charging, or must be replaced. It can tell you if the battery is charged enough for the capacity, or heavy-load test.

TEST PROCEDURE — HYDROMETER

The following steps outline a typical procedure for performing a State-of-Charge test:

1. Remove vent caps or covers from the battery cells.
2. Squeeze the hydrometer bulb and insert the pickup tube into the end cell. Start with the positive (+) terminal cell.
3. Slowly release the bulb to draw in enough electrolytes to cause the float to rise. Do not remove the tube from the cell.
4. Read the specific gravity indicated on the float. Be sure the float is drifting free, not in contact with the sides or top of the barrel. Bend down to read the hydrometer at eye level. Disregard the slight curvature of liquid on the float.
5. Read the temperature of the electrolyte.
6. Record your readings and repeat the procedure for the remaining cells.

TEMPERATURE CORRECTION

The specific gravity changes with temperature. Heat thins the liquid, and lowers the specific gravity. Cold thickens the liquid, and raises the specific gravity. Hydrometers are accurate at 26.7°C. If the electrolyte is at any other temperature, the hydrometer readings must be adjusted.

HYDROMETER TEST RESULTS INTERPRETATION

Specific gravity readings tell a lot about battery condition.

1. A fully charged battery will have specific gravity readings around 1.275 – 1.295.
2. Specific gravity readings below 1.225 usually mean the battery is run down and must be charged.
3. Readings around 1.190 indicate that sulphation is about to begin. The battery must be charged immediately.
4. Readings of 1.155 indicate severe discharge. Slow charging is required to restore active materials.
5. Readings of 1.120 or less indicate that the battery is completely discharged. It may require replacement, but slow charging may restore some batteries in this condition.
6. A difference of 50 points (0.050) or more between one or more cells indicates a defective battery. It should be replaced.
7. When the specific gravity of all cells is above 1.225 and the variation between cells is less than 50 points, the battery can be tested under load.

OPEN-CIRCUIT VOLTAGE

An accurate digital voltmeter is used to check the battery's open-circuit voltage:

1. If the battery has just been charged, turn on the headlamps for one minute to remove surface charge.
If not on the vehicle, let the battery rest for at least two hours.
2. Turn headlamps off and connect the voltmeter across the battery terminals.
3. Read the voltmeter. A fully charged battery will have an open-circuit voltage of at least 12.6 volts. A dead battery will have an open-circuit voltage of less than 12.0 volts.

NOTE: The indicator eye should be used only as a general indication of electrolyte level and strength.

HEAVY-LOAD TEST

While an open circuit voltage test determines the battery's state of charge, it does not measure the battery's ability to deliver adequate cranking power. A capacity, or heavy-load, test does.

The following steps outline a typical procedure for load testing a battery:

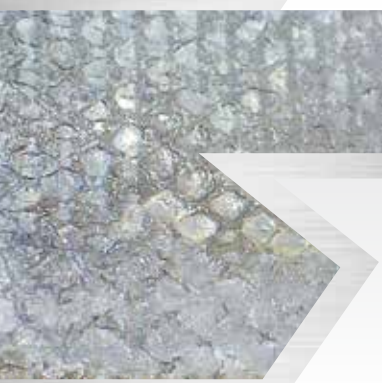

1. Test the open circuit voltage. The battery must be at least half charged. If the open circuit voltage is less than 12.4V, charge the battery.
2. Disconnect the battery cables, ground cable first.
3. Prepare the tester:
 - Rotate the load increase control to OFF.
 - Check each meter's mechanical zero. Adjust if necessary.
 - Connect the tester load leads to the battery terminals; Red to positive, BLACK or BLUE to negative.
 - Increase the load control until rated CCA is achieved. Then check voltage.
4. The battery must hold the rated amps and stay above 10.8V for at least 30 seconds.

CAUSES OF FAILURE

OVERCHARGING

Overcharging by the vehicle's charging system or separate battery charger causes excessive gassing and high internal heat. Too much gassing can wash active materials off the plates, as well as cause excessive water usage. Too much heat can oxidise the positive plate material and warp the plates.

UNDERCHARGING

A faulty charging system will not maintain the battery at full charge.

Severe undercharging allows sulphate on the plates to become hard and impossible to remove by normal charging. The weak electrolyte freezes easier. The undercharged battery may fail to crank the engine.

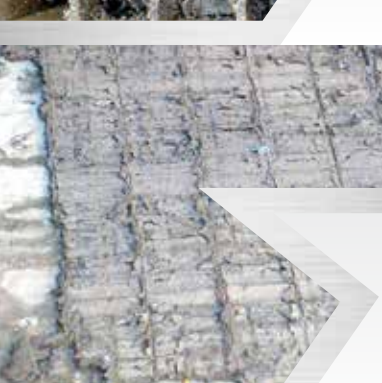

ELECTROLYTE LEVEL

A low electrolyte level exposes active material, and any sulphate hardens and resists chemical action. Loss of electrolyte may be caused by a cracked case, poor maintenance (not adding water when needed), or severe overcharging which causes high internal heat and excessive gassing. Too much electrolyte is just as bad. Overfilling dilutes the electrolyte and spillage may corrode battery terminals, and damage vehicle parts and the electrical system.

CORROSION

Spilled electrolyte and condensation from gassing may cause corrosion on terminals, connectors, and metal hold-downs/carriers. Such corrosion increases electrical resistance, which reduces available voltage and charging effectiveness. It may also create a current leakage path to allow self-discharge.

OVERCYCLING

Repeated overcycling from fully charged to fully discharged and back – may cause loss of active material from the positive plates. This reduces battery capacity and its useful life.

WARRANTY CHECKLIST

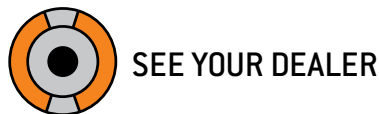

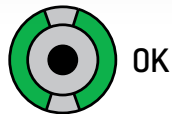

- Ensure the warranty period has not expired.
- Customer has retained his/her proof of purchase.
- The battery has not been used in an improper application.
- The battery is installed correctly.
- Electrolyte has not been contaminated.

MAINTENANCE FREE BATTERIES

When determining state of charge of the battery please refer to the Hydro-Eye on top of your SuperCharge Battery.

*Note: Hydro-eye is an indicator only. Tests should be carried out to ascertain batteries state of health.

- Perform tests using conductance and load testers.

WARRANTY STATEMENT

AUTOMOTIVE & MARINE STARTING BATTERIES

SUPERCHARGE BATTERIES WARRANTY

SuperCharge Batteries warrants its automotive and marine starting batteries against defects due to faulty manufacturing during the specified warranty periods. The benefits under this warranty are in addition to other legal rights and remedies you may have in relation to SuperCharge Batteries in Australia and New Zealand. In Australia, our goods come with guarantee that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

WARRANTY COVERAGE

This warranty covers:

- and is limited to the repair or replacement of the battery only, and does not cover the cost of transport of battery, labour for removal and replacement of the battery from and into the vehicle, or any other consequential damages and costs incurred;
- batteries that become unusable or unserviceable due to manufacturing defects during the warranty period stated on the battery top label commencing from the date of purchase. Note that warranty period is 12 months for Commercial, Truck, or Industrial use, and 6 months for Taxi or any Passenger Transport Service use;
- batteries that are sized correctly, used in the application for which it was intended, and properly charged with an approved charging profile.

WARRANTY CONDITIONS

- Without exemptions, **proof of purchase** is required to claim under this warranty.
- This warranty is not transferable and is only offered to the original end-user of the SuperCharge battery.
- The warranty period is not renewed or extended as a result of a warranty repair or replacement subject to your rights under the Australian & New Zealand Consumer Law.

WARRANTY EXCLUSIONS

The warranty will be voided and not be honoured if the battery:

- defects are as a result of normal wear and tear;
- has been subjected to overcharging, undercharging, freezing, fire, and explosion;
- has been discharged resulting to sulphation or due to excessive load;
- has been failed to be maintained with the right acid levels (for accessible types);
- has been topped up with any liquid or additive other than distilled water (for accessible types);
- is damaged caused by acid spillage from due to overfilling (for accessible types);
- shows evidence of after-sale physical damage, abuse, and neglect;
- has been used in the wrong application (e.g. used in vehicles with Start-Stop system or in Deep Cycle applications) or under-specified against the vehicle's requirement;
- has been used in a vehicle with a faulty charging system or faulty terminal connection (corroded, loose, flayed, or reversed);
- has been stored or installed for a long period without reconditioning;
- has tampered markings or broken or removed vent plugs;
- is damaged due to improper mounting or installation;
- has been repaired or modified by a third party, without SuperCharge's consent.

WARRANTY CLAIM PROCEDURE

- The battery, together with the sales invoice or receipt as proof of purchase, must be endorsed, for warranty evaluation and validation, to any nearest SuperCharge authorised reseller, or state or territory office in person or freight pre-paid by you.
- If SuperCharge (by itself or through an authorised reseller) finds on examination that the battery is defective due to faulty manufacturing or material and is within the specified warranty period, then the battery will be replaced with an equivalent battery free of charge.

This warranty is given by SuperCharge Batteries located at **AU: A/I Reconciliation Rise, Pemulwuy NSW 2145**
NZ: 8B Westfield Place, Mt. Wellington 1060. SuperCharge Batteries can be contacted through email **warranty@supercharge.com.au** or phone **AU: 1300 228888 NZ: 0800 188 122**.

WARRANTY STATEMENT

DEEP CYCLE BATTERIES

SUPERCHARGE BATTERIES WARRANTY

SuperCharge Batteries warrants its deep cycle batteries against defects due to faulty manufacturing during the specified warranty period. The benefits under this warranty are in addition to other legal rights and remedies you may have in relation to SuperCharge Batteries in Australia and New Zealand. In Australia, our goods come with guarantee that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. NZ: 8B Westfield Place, Mt. Wellington 1060. SuperCharge Batteries can be contacted through email **warranty@supercharge.com.au** or phone **AU: 1300 228888 NZ: 0800 188 122**.

BATTERY WARRANTY CHECK PROCEDURE

BATTERY FAULTY!

PROOF OF PURCHASE MUST BE PRODUCED

CHECK DATE AND APPLICATION IF PRIVATE OR COMMERCIAL USE

CHECK THE BATTERY FOR OBVIOUS DAMAGE

CONDUCT PERFORMANCE TEST

RECHARGING OF THE BATTERY MAYBE REQUIRED TO CONFIRM TESTS

WARRANTY WILL BE VOIDED IF:

- Wrong vehicle application.
- Beyond warranty period.
- Signs of mishandling.
- Damaged cover, casing, terminal posts, or plugs.
- Occurrence of leaks brought about by damaged cover or casing.
- Tampered codes and labels.
- Signs of overcharging (bulging) and undercharging (sulphation).

REMINDERS:

- DISCHARGED/FLAT battery is not a "warranty".
- Warranty only covers "MANUFACTURING DEFECTS".
- Battery may need to be returned to the manufacturer for testing if required.
- If load tester is available it is recommended to use it to confirm the results.
- Make sure to key in the correct CCA or AH, whichever is applicable on the testers.
- Normal wear and tear which may mean not meeting the CCA or AH claim, is not a warranty.
- Warranty period is not renewed or extended should a battery replacement be approved.

Note: Please also refer to warranty statements.

SAFETY CHART

SuperCharge Batteries respects and understands the importance of safe procedures when handling and installing batteries. Please refer to the following symbols to ensure that you are not placing yourself and others in any dangerous situations.

Never place metal objects between terminals

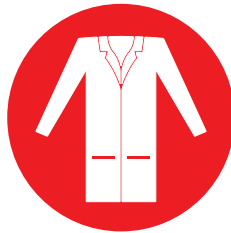

Automotive batteries can and should be recycled

Qualified installation recommended

Use care when lifting (batteries are heavy)

Use acid resistant clothing

Eye protection recommended

Wash eyes immediately with water

Do not smoke near batteries

Battery acid is corrosive

Keep naked flames away from batteries due to risk of explosion
